The environmentally sound weed removing.
Innovative flame weeding. **Made in Germany.**

Reinert 
Metallbau GmbH

Break new ground.

Set new environmentally standards for weed removing in the hop cultivation!

Preservation of the nature is our task. Please also contribute to this.

We must all break new ground to ensure an environmentally sound interaction between man and nature.

With HopfenFLAMM XR it is possible to fully dispense with chemical pesticides also in the field of hop cultivation. Our devices are easily to be applied for row cultivation and for defoliation.

By using the flame weeding you contribute to an intact ecosystem by natural means. Technology working in harmony with man and nature. That's our claim.

Innovative flame weeding.

Made in Germany.

- environmentally sound
- efficient, clean + free of residue
- easy handling
- comfortable
- robust and maintenance low

Unique burner technology.

As the leading manufacturer in the field of thermal weed removing in Europe, we offer the most effective burner technology among all industry partners.

Therefore this alternative weed removing can be done in a practical, efficient, economical and environmental manner.

Due to our unique burner technology there can be produced the maximum possible temperatures of 1.925°C with propane gas. An optimal gas-air mixture ensures a completely residue-free combustion.

The laterally sharp heat protection of our high-performance burners allows a very precise and targeted work.

HopfenFLAMM XR is fitted with a comfortable electric burner and includes a fast shutdown.

All burners can conveniently and electrically be switched on and off from the cap.

The more efficient method.

Using this method the plant parts are not burned, but the rapid increase of temperature to at least 70 °C causes the bursting of the cell walls.

The cell structure of the wild herbs is thereby destroyed and the cells die.

The regrowth is reduced. Seeds, root systems and fungal spores are long-term destroyed.

Many years of experience.

Take advantage of our many years of experience in flame technology!

Since 1973 we develop and produce innovative quality products with high performance, low consumption and long lifetime.

Environmentally sound, efficient and safe.
